$$\left\{ \begin{array}{l} \text{Gain} = 6 \text{ dB} \\ P_{(2\omega_1 - \omega_2)} = -40 \text{ dBm} \\ P_{\omega_1} = -4 \text{ dBm} \end{array} \right.$$

مقادير طاق و رودي و (الف) فريوي؟

طرح سيال درودي؟ $\Rightarrow P_{(2\omega_1 - \omega_2)} = -50 \text{ dBm}$ ؟

$$P_{(2\omega_1 - \omega_2)} \approx 3P_{\omega_1} - 2P_{IP} \Rightarrow 2P_{IP} = 3P_{\omega_1} - P_{(2\omega_1 - \omega_2)} = -12 + 40 = 28 \text{ dBm}$$

$$\Rightarrow P_{IP} = \frac{28}{2} = 14 \text{ dBm}$$

$$P_{IP'} = P_{IP} - 9 \text{ dBm} = 14 - 9 = 5 \text{ dBm}$$

~~$P_{dB} = P_{IP} - 10.63 = 14 - 10.63 = 3.37 \text{ dBm}$~~

$$P_{dB} = P_{IP} - 10.63 \text{ dBm} = 14 - 10.63 = 3.37 \text{ dBm}$$

$$G_0 = 20 \log K_1 \Rightarrow K_1 = 20 \Rightarrow A = \left[0.145 \frac{20}{20} \right]^{\frac{1}{2}} = 0.38$$

$$P_i = 10 \log \left\{ \left(\frac{A}{\sqrt{2}} \right)^2 \cdot \frac{10^3}{R} \right\}$$

$$P_o = 10 \log \left\{ \left(\frac{K_1 A}{\sqrt{2}} \right)^2 \cdot \frac{10^3}{R} \right\}$$

$$= 10 \log \left\{ \left(\frac{20 \times 0.38}{\sqrt{2}} \right)^2 \cdot \frac{10^3}{R} \right\}$$

$$\therefore A^2 = \frac{2}{3} \times \frac{K_1}{1431}$$
